New Views of the Solar Atmosphere - NAS Home

The NSF's Inouye Solar Telescope images the sun in more detail than we've ever seen before. The telescope can image a region of the sun 38,000km wide. Close up, these images show large cell-like structures hundreds of kilometers across and, for the first time, the smallest features ever seen on the solar surface, some as small as 30km.

What's New in Views of the Solar System

Feb. 6, 2015 NOAA's DSCOVR: Offering A New View of the Solar Wind There's a fascinating spot some 932,000 miles away from Earth where the gravity between the sun and Earth is perfectly balanced. This spot captures the attention of orbital engineers because a satellite can orbit this spot, called Lagrange 1 just as they can orbit a planet.

Offering A New View of the Solar Wind | NASA

The Max Planck Institute for Solar System Research (MPS) in Goettingen, Germany, invites applications for several research positions in solar physics. The positions are available in the Solar and Stellar Interiors Department starting as soon as September 2020 for a period of two years, with the possibility of an extension.
