Pseudogout Wrist Manual Guide

Pseudogout is a type of arthritis. It is also called calcium pyrophosphate deposition disease (CPPD). Pseudogout causes calcium crystals to form in cartilage and collect in fluid called synovial fluid that surrounds joints. The crystals damage the cartilage and can cause swelling that leads to pain in the joint.

What really clinches a pseudogout diagnosis is a sign straight from the joints. "Ideally you're trying to find evidence of the crystal deposition," says Dr. Davis. A doctor can take synovial fluid — a thick liquid that helps joints move smoothly — from the affected area and check it for those diamond-shaped crystals.
